The Resilient Yard

- Alma Cardenas

This presentation is for homeowners who want to know what simple steps they can take in designing and maintaining their yard to battle climate change. The presentation is broken down into sections on climate change, lawn maintenance, garden bed design & growing veggies.

Climate Ready Plants

- Molly Van der Burch

Want plants that can better handle our changing PNW climate? Discover the unique traits of natives, cultivars, and perennials. Explore how they vary in attracting pollinators, adding biodiversity, and demonstrating climate readiness for a drier PNW region. Learn specific plants from a UW study that have proven to thrive with less water.

Protecting Pollinators

- Sue Melgaard

Did you know that a fly is a very important and powerful pollinator? We will discuss the amazing world of pollinator and beneficial insects and how they can create a very flourishing garden teaming with life and vitality.
